

ACS Solutions Railroad Electrician Test Light

ACS Part Number 31931

ACS Solutions' new Railroad Electrician Test Light gives electricians and mechanics the extra time they need to complete a job by no longer having to build their own lights.

This light is compact in size and can be attached using the magnet or hung by its lanyard. The leads combine to make a handy jumper, and it is overload protected by a fuse. The light is visible from a 360o radius through its protective lens.

The light will test for control grounds on locomotive control circuits. It can also be used to diagnose manual relays on older locomotives.
